

Many of my clients and customers that I work with are victims of different experiences and circumstances of victimization. This victimization includes crimes of being stalked, hacked, video voyeurism, and more severely child/human sex trafficked.

One of the most common questions that I get is how criminals/hackers/perpetrators (perps) are able to attack their appliances and smart devices through the electrical system.

I am going to answer that question for you all today, this is information that I received from my SAF (Subliminal Acoustic Fingerprinting) process.

There is a "script," AI (Artificial Intelligence), program, that is being transmitted through the use of the electricity and the electrical power grid. This script is being supplied to multiple (victims) through the use of transmissions and subliminal communications. Power within the electrical grid is used **3 different ways**, **generation, transmission, and distribution** which manages grids to manage power, and deliver the electricity into everyone's homes.

The scripting is attached to the transmission aspect of the electrical system because it is transmitted either through a wired or wireless connection to get to the location for use. This is where the transformer comes into light because the transformer moves the electricity to one location to another. A transformer also uses electromagnetic induction and transfer that power into an AC (Alternate Current) and can be used as a DC (Directional Current). This allows the **transformer to increase and decrease with voltage** which starts at the power plant then passes through the transformer and its location.

Using the scripting and programing with the transmissions into an astronomical amount of uninformed, unconsented citizens of multiple countries. This also forces the consumer (people paying their bill) to force energy usage into their homes without their knowledge.

Criminals can **amp up the voltage and usage** to make bills increase and put debt on hundreds of innocent victims. Multiple federal agencies have worries about criminals and hackers accessing this power grid when they already have. If you ever had a bill with an astronomical amount this is the reason behind that bill and expenses.

With the use of the electrical grid, power, and voltage the clients and customers are able to pull the power supply for an electrical attack on victims body to different locations with their electromagnetic and microwave weapon systems. The transmission lines and transformers come

into a substation which has access to **circuit breakers, switches**, capacitors, grid operators, and works through an interface system.

A national grid system is formed by interconnecting network system which has 2 different uses from HVAC (High Voltage Alternate Current) and HVDC (High Voltage Direct Current) which has to have **frequency controls**. The frequency controls can be visually seen and can give a display of the frequencies from the use of histograms, spectrograms, and analyzer tools and software.

Frequencies are used to control and is key with different uses of processes, operating systems, city, and countries power grids. "US uses the frequencies set of 60 Hz, 60 vibrations per second and generators and users can pass power efficiently and safely with no effect to any devices using the power <https://ecsxtal.com/news-resources/articles/599-frequency-and-frequency-control-why-do-they-matter#:~:text=Frequency%20control%20can%20be%20defined%20as%20the%20process,to%20the%20correct%20frequency%20when%20these%20deviations%20happen.>" The UK uses the frequency control of 50Hz with the vibrations of 50 per second, both the US and UK **can move the frequencies in a backward and forward motion causes oscillation** which is known as **electrical frequency**. <https://www.nationalgrideso.com/electricity-explained/how-do-we-balance-grid/what-frequency#:~:text=All%20UK%20appliances%20and%20electrical%20equipment%20are%20designed,within%20a%20tight%20window%20either%20side%20of%2050Hz.>

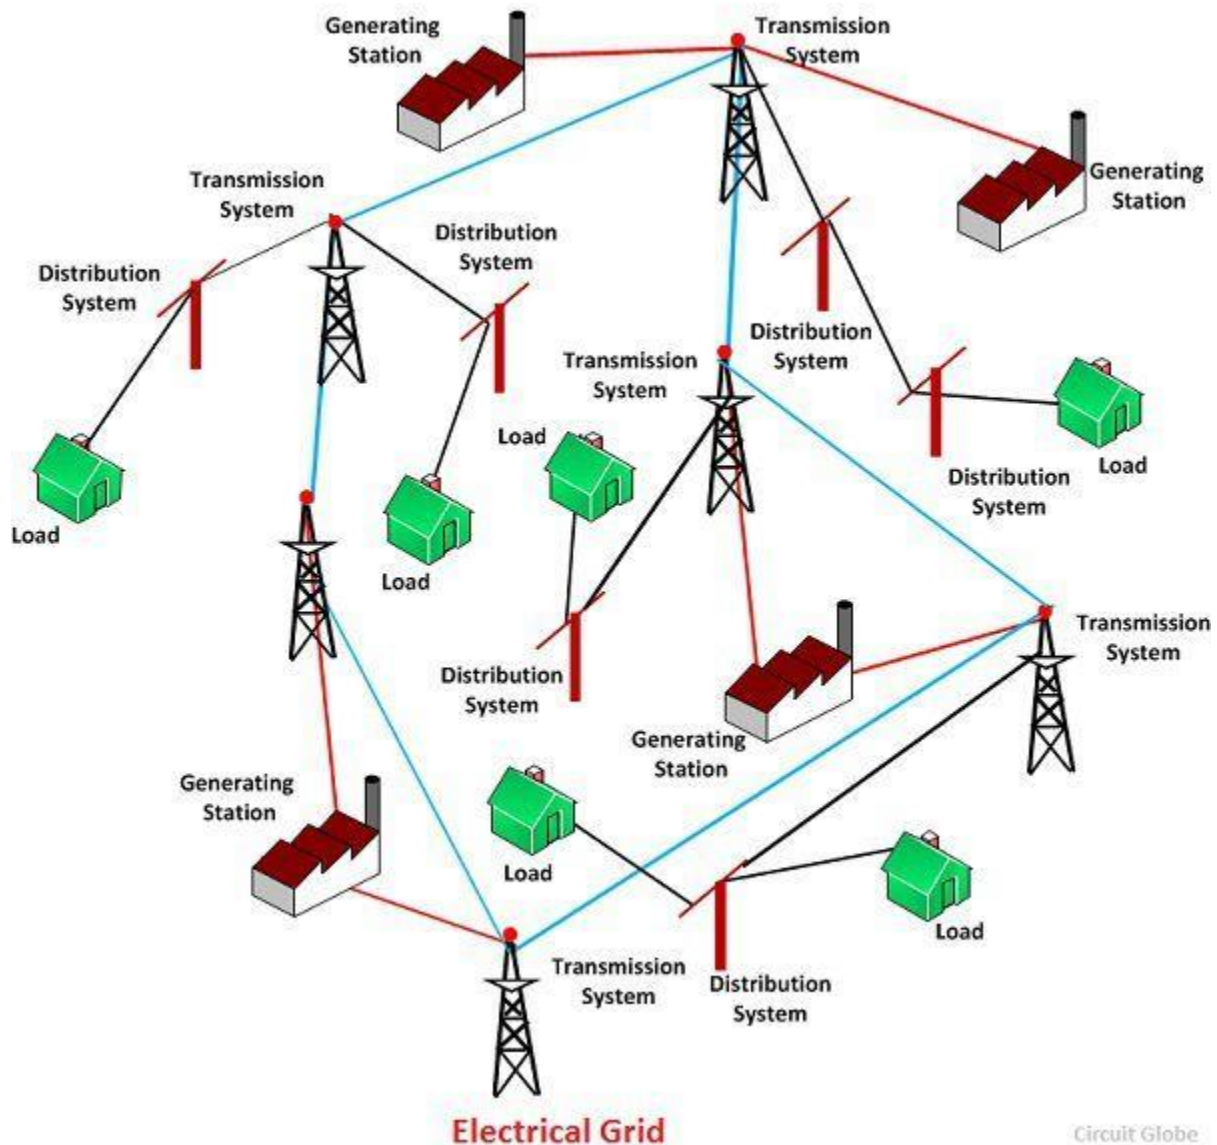

There are many different types of oscillation tactics including Neural Oscillation into neural network systems. Neuro-Oscillation is "synchronized rhythmic patterns of **electrical activity** produced by neurons in the brain, spinal cord and autonomic nervous system <https://www.britannica.com/science/brain-wave-physiology>," Meaning that criminals can access the neural networks by collecting the frequencies and attacking the human body through the brain with the electrical grid. The Neural oscillators use a synchronization process of a **phase range**, which correlates back to the transformers being used by the electrical grid by national standards. For example: "**a three-way phaser transformer** is a machine that passes electricity between energy circuits either increasing or decreasing the voltage and alternating frequencies <https://tameson.com/transformer-three-phase.html#:~:text=Three-phase%20transformers%20are%20passive%20machines%20that%20pass%20electrical,stepping>

[%20down%20%28decrease%29%20voltages%20without%20altering%20the%20frequency.”](#)

This is the power supply to the weapon systems that are being used for attacks

Neural-Oscillators also has a second phase called the “**receiving phase**,” which connects to upstream inputs and ties into neural networking along with visual feeds, live streams.

Connecting to the electrical grid system can cause a lot of issues like frequency tripping, increase in the fault level which ties in **AC units** within people's homes.

HVDC tie in AC units between 2 interconnected systems of a non-synchronous (Asynchronous), with frequencies that are either the same or different. The smart grids have the same productivity as the electrical grid systems, with the HVDC can control the power flow.

You now know how they are accessing the power grid these ties into the **power supply** of all of peoples appliances. Appliances since 2000, have all changed into smart technology, and have additional proximity and IR sensors built within the operating systems and circuit boards of the appliances along with being connected to the power grid. These appliances include refrigerators, microwaves, dishwashers, ceiling fans, thermostats, Smart meters, Dimmer light switches, Lightbulbs, television sets, and many more applications. This is all caused by the Energy Efficiency Act that was passed by the Obama and Biden presidency era, with contracts with the Department of Defense for all appliances within the US.

The power supply to all of the appliances have access to the IR and proximity sensors, with different plugins or modules criminals can use remote access into those appliances and use different features that the IR sensor and proximity fuses are used. Telling distance of target, thermal readings, body sensors and other, there are over 10,000 different plugins, modules that can be used. This is a form of video voyeurism, stalking, harassment technique.

With the use of the scripts (programs/AI) being used within the transmissions (frequencies/subliminal communications/subcarrier waves) behind the power supply is transmitted into the appliances.
